ImageProxy verbeteren??

Industrieel Ingenieur Informatica, Hogeschool Gent 22/10/2012
```

Protectie proxy
Toegang tot remote object
Virtuele proxy
Toegang tot bron, duur om maken
Protectie proxy
Toegang tot bron op basis van toegangsrechten

Protectie proxy met Java API

Java

Ondersteuning proxy's

java.lang.reflect

Aanmaken proxyklasse

Implementeert een aantal interfaces

Stuurt methodeoproepen door naar opgegeven klasse

Wordt aangemaakt at runtime (dynamic proxy)

Voorbeeld: datingservice $public interface \ \underline{PersonBeanImpI} \ \ implements \ \underline{PersonBean} \ \big\{$ public interface PersonBean { String name, gender, interests; int rating, ratingCount = 0 String getName(); public String getName() {...} String getGender(); public String getGender(){...} String getInterests(); public String getInterests(){...} int getHotOrNotRating(); public int getHotOrNotRating() { if (ratingCount == 0) return 0; else return (rating/ratingCount); void setName(String name); void setGender(String gender); $public\ void\ {\color{red} setName}(String\ name)\ \{...\}$ void setInterests(String interests); public void setGender(String gender) {...} void setHotOrNotRating (int rating); $public\ void\ setInterests (String\ interests)\ \{...\}$ public void setHotOrNotRating (int rating) { this.rating += rating; ratingCount++; Industrieel Ingenieur Informa}ica, Hogeschool Gent 22/10/2012

NonOwnerInvocationHandler

15

Industrieel Ingenieur Informatico, Hogeschool Gent 22/10/2012

```
Opmerkingen

Testen of een klassen een proxyklasse is?

Methode isProxyClass()

public static Object newProxyInstance(ClassLoader loader, Class<?>□ interfaces, InvocationHandler h) throws IllegalArgumentException

Beperking interfaces?

Interfaces, geen klassen

Niet-publieke interfaces behoren tot zelfde package

Geen conflicterende methodenamen (met zelfde signatuur)

...

Industrieel Ingenieur Informatica, Hogeschool Gent 22/10/2012
```

Andere proxy's | Firewall Proxy | Regelt toegang tot netwerkresources | Beschermt tegen slechte clients | | Smart Reference Proxy | Extra acties bij een referentie | Tellen aantal referenties | | Cache Proxy | Tijdelijke opslag "dure" operaties | Delen resultaten tussen meerdere clients
